

The most versatile IP-Based Video Solution Provider in the world

Quick Start Guide

P2 Video Encoder

4G Video Encoder

(2021-11 version)

Contents

- Packing list
- Device interface and function
- Device connection, login and application
- Using guide for the bonding service
- Device upgrade and restore the factory setting

Before using this product, it is recommended that you read the guide carefully. To ensure your personal safety and avoid physical or electrical damage to the device, please strictly follow the instructions of this guide to install and use it under the guidance of professionals. Incorrect electrical connections or physical installation may cause permanent damage to the device and even threaten personal safety.

1 Packing List

CKILOVIEW" P2 4G ENDING ENCODER		
(1) Device×1	(2) Power Supply×1	(3) Cole Shoe
(4) Warranty Card×1	(5) Quick Start Guide×1	(6) 4G Antennas

2 Device Interfaces

- (1) Power port
- (2) Battery level/charging indicator
- (3) HDMI input
- (4) HDMI signal indicator
- (5) Power button
- (6) Power indicators
- (7) Streaming button
- (8) Streaming indicator

- (9) 4G antenna port
- (10) Reset
- (11) USB expansion port
- (12) WiFi indicator
- (13) 4G indicator
- (14) SIM slot
- (15) Micro SD/TF slot

3 Device Indicator

Name	Color	Status	Description	
	White	ON	Working	
Power Indicator		Flashing	Starting	
		OFF	Power off or failure	
HDMI signal	\//bita	ON	HDMI signal locked	
indicator	white	OFF	HDMI signal unconnected	
Battery indicator	White	ON	Working	
		Flashing	Charging	
		OFF	The device is abnormal or not started	
Streaming		ON	Start streaming	
Indicator		OFF	Stop streaming	
		ON	Working	
wift indicator	кеа	OFF	WiFi disconnected	
	Red	Slow flashing	Finding network (200ms high/1800ms low)	
4G Indicator		Slow flashing	Standby (1800ms high/200ms low)	
		Fast flashing	Data transmission (125ms high /125ms low)	

4 Device Connection

Introduction

- For the first usage, please use the USB to RJ45 connector to connect the device to the wired network.
- After logging into the device web page, you can configure the wired network, 4G and WIFI.
- If multiple network links are connected, while aggregate links are not used, the network priority is the wired network, followed by the WIFI and the 4G.

Note

- Please use the standard power adapter to power the device. Other unqualified power supplies may damage the device.
- The device is powered by a built-in battery, it can be used for 3-5 hours without connecting the power adapter.
- Press the power button for more than 5s until the power indicator no longer flashes, the .boot is complete.

5 Device Discovery

5.1 Use the free tool ---ONVIF Device Manager

Download the ONVIF Device Manager for free

Visit the website https://sourceforge.net/projects/onvifdm/ to download and install ONVIF Device Manager. Please follow the software operation guidelines for the download method/installation.

ONVIF Device Manager is a network video app for managing network video, network video storage and network video analysis. Realize services such as discovery device, media, imaging, analysis and PTZ.

Step 1: Start ONVIF Device Manager, all devices in the network can be found in the

device list.

Step 2: Click the device in the device list, the device information will be displayed in the

information bar.

ONVIF Device Manager v2.2.250					
Name Password	Log in ✓ Remember				
Device list 《	Chan_1		Identification		
Name, location or address Cancel	[Identification Time settings	Name	Chan_1	
Chan_1		Maintenance Network settings User management	Location	default	
Firmware 4.7.2512 Address 192.168.3.244	Οηνιέ		Manufacturer	KILOVIEW Electronics Co., Ltd.	
Location default			Model	E1	
		Web page	Hardware	urn:uuid:95254bde-5e68-4fd3-a9e5-aaa202107211	
		Events	Firmware	4.7.2512	
	NVT	Refresh	Device ID	202107211	
	000: MainStream Profile		IP address	192.168.3.244	
	-	Live video	MAC address	0A-82-02-10-72-11	
		Video streaming	ONVIF version	2.0	
	Imaging settings		URI:	http://192.168.3.244:8080/onvif/device_service	
		PTZ control Profiles		Apply Cancel	

- Access method: Open a web browser and enter in the address bar: http://device IP address/ (the device IP address is the IP address of the P2 displayed in the device list).
- The working network that the device is connected to needs to support automatic acquisition of IP (DHCP). After the device automatically acquires the IP, it can be discovered by the software through Onvif.

5.2 Solution for the device cannot be found

If the P2 device cannot be found on the network with above method due to the network

issues, please try to access the device by the default fixed IP address 192.168.1.168. That is,

fill the http://192.168.1.168/ in the browser to enter the WEB page.

6 Login to the device WEB page

Enter to the WEB page, the default user name and the password are both **admin**.

Note

- To ensure information security, it is recommended to change your password immediately after logging in for the first time!
- Due to the browser compatibility issues, it is recommended to use Chrome, Firefox or Edge.

7 Device Working

7.1 Video source checking

Login to the device WEB page, enter the "Devices and Media Streams"-"Encoding and Streaming Parameter Settings", and check through the Motion JPEG stream. If there is no video input, it is a blue image. If the video is connected, it will display the real-time video image, and it changes every 3 seconds.

Note

If the video source is connected, the blue screen or abnormality is still displayed, please check the video input source, video resolution format or cable, etc.

7.2 Encoding streams checking

Download the VLC

Download and install the VLC through the official address https://www.videolan.org/vlc/. Please follow the official guidelines of VLC for the download /installation.

VLC is a free, open source, cross-platform multimedia player and framework that can play most multimedia files, as well as DVD, CD, VCD and various streaming protocols.

- 1. Click the "Encoding and Streaming"-"Encoding and Streaming Parameter Settings";
- 2. In the H.264 stream, copy the URL address displayed on the right side of RTSP;
- 3. Open "Media" ---- "Network Streaming" of VLC;
- 4. Enter the URL address of RTSP in the network, and click the [Play] button in the lower right corner;
- 5. VLC will play the input video of device.

7.3 RTMP live streaming

Introduction

Streaming services pushed through the device's WEB page are only transmitted through a single network. If you need to transmit through an aggregated link, please refer to the section on bonding services.

- The bonding service adopts Kiloview' s patented algorithm (KiloLink) to solve the problem of weak network transmission. According to the signal strength of each network, it is intelligently adjusted, and it maximizes the bandwidth of all network links for transmission.
- The bonding service can dynamically adjust the code rate. When the network link bandwidth is not enough, the code rate is automatically reduced to adapt to the current link bandwidth; when the link bandwidth is sufficient, it will smoothly increase to the code rate configured by the encoding.
- When network packet loss occurs, the aggregated link will retransmit through multiple network links to keep the video stable and smooth.

First, add an RTMP push point on the device side. Click "Encoding and Media Streaming" --

- "Encoding and Streaming Parameter Settings", and then click "Add a Streaming Service" under the H.264 main stream, and select "RTMP Push" in the pop-up window ", after confirming, generate a push point.

H.264 Main Stream		[***]
Add a stream service	×	SET SET
Stream service:	TMP Pushing	
	Cancel	
(RTSP always start)	Access by: rtsp://192.168.28.121.554/ch01	۲
KMP Media Service		
Add a stream		

Take FACEBOOK as an example, first obtain the RTMP push URL on the live platform. Login

to FACEBOOK, click "Live Video" to enter the live room, and click "Use Stream Key" for live

broadcast. Fill in the URL of live broadcast and Stream Key into the URL address of the RTMP

push point, and start the streaming service. You can see the video in the live broadcast room.

Get Started Choose how you want to start setting up your live video.	am Key Use Camera Use Paired Encoder
Ensure any pre-recorded content is clearly distinguishable from graphics. You can also share pre-recorded content on Facebook	m live content, and includes appropriate disclosures about being pre-recorded in the description or through ok by uploading the video as a post on your timeline instead of streaming as a live video on Facebook Live.
Setup Options	Live Stream Setup Copy and paste these settings into your streaming software.
Use a Persistent Stream Key This can be reused every time you go live. You can only broadcast one live video at a time with your persistent stream key.	Server URL
Use a Dealum Staram	rtmps://live-api-s.facebook.com:443/rtmp/
Once a backup stream is added to your live video, it cannot be removed. It will not affect your stream if you choose not to use it.	This may be referred to as "URL" or "Address" in your streaming software.
	Stream Key
	FB-365177915186457-0-Abzja4_GTMB0mffG Copy
Settings	This stream key is valid until you log out of Facebook. Once you start to preview the broadcast you have up to 5
Stream	v
Viewing	✓ Event Logs

- If the platform RTMP streaming address and live broadcast code are separate, please use the symbol "/" to add the live broadcast code after the RTMP address. The format is: rtmp address/live code.
- Please make sure the device is connected to the network, and configure the correct IP address, DNS and other parameters.

For more information about the P2 streaming service, please visit

Kiloview website:

https://www.kiloview.com/en/support/docs/p2/user/parameters-

configuration/encoding-streaming-media/#Streaming_media_service

8 KiloLink Server

8.1 4G network connection

Introduction

- The device can support up to 5 networks transmission:
 1. 2 internal 4G modems + 2 USB extensions 4G modems + one WIFI
 2. 2 internal 4G modems + 1 USB extensions 4G modems + one WIFI + one Ethernet.
- When inserting 4G USB modems, there are two modes: one is "MODEM" mode, the other is "ETHERNET CARD" mode. In the MODEM mode, it will be recognized as 3G/4G Modem 3 or 3G/4G Modem 4. In the ETHERNET CARD mode, it will be recognized as USB network connection 1 or USB network connection 2.
- The device does not support hot swapping of the SIM card, please insert the 4G SIM card when the device is off, or restart the device after inserting the SIM card

Login to the device Web page, click "Network & Service Settings" – "Network interface management", and click "Settings"-"Add a new wireless WAN connection" of the 4G card.

Wan Connection				
Connection name:				
Network type:	GSM/GPRS/E	EDGE/UMTS/	HS 🗸	
APN:				
Diag Number:	*#99#			
Username (default empty):				
Password (default empty):				
PIN code for SIM card:				
4G LTE Only	no		~	
		SAVE	Return	

APN: Fill in the correct APN according to different operators. If you are not sure, please contact your local 4G card operator.

configuration/network-config/

8.2 KiloLink platform deployment

Please make sure that your KiloLink server have been updated to

the latest version, please refer to:

https://www.kiloview.com/en/support/docs/kilolink-bonding-

platform/kilolink-bonding-platform/

8.3 Device connection

Step 1: Add the device to the platform and generate an authorization code.

Click "Device management" - "Add device", configure the parameters and generate an authorization code.

Add device					
* Serial Number	181202032				
* Name	P2				
* Authorization Code		đ	Generate Auth Code		
Owned User	Admin		~		
()	🗹 Private (only v	isible to	youself)		
Cancel			ок		

Introductions:

- Serial Number: Login to the device Web page to get the Serial Number in the lower left corner of "System Information", which consists of 9 figures.
- Name: Any combinations of alphabets, numbers and symbols.
- Authorization Code: Click "Generate Auth Code", then an authorization code combining with letters and numbers will be generated automatically, which will be used for device registration.
- Owned User: The added devices can be visible to a certain user you assigned. All devices will be displayed under the management account.
- Private: After selected private, the added device will only be visible to yourself and the management account (admin).

Step 2: Device registration

Login to the device Web page, click "Network & Service Settings" – "Connect Bonding Server", and configure the parameters to start the bonding service.

Please make sure that your device firmware has been updated to the latest version, please refer to Chapter 9 "Firmware Upgrade" to download and update the device

- Server address: The IP address of the bonding server, which support domain names.
- Port: The default port is 60000.
- Auth Code: Generated when adding the device to the bonding platform.

8.4 Streaming service

Login to the KiloLink bonding platform webpage, click any area in the line of the online device under "Device Management", and the device streaming service and video preview window will pop up.

Introduction

- Streaming with the streaming service of the bonding platform, all traffic will be transmitted through the aggregation link. If the streaming service is pushed on the web page of the device, it will only be transmitted through a single network, and the network link is not selectable.
- The maximum bitrate of the streaming cannot exceed the code rate configured on the encoder. When the network link bandwidth is not enough, the streaming service will adaptively reduce the output bitrate.

For more information of the KiloLink bonding platform streaming

service, please visit:

https://www.kiloview.com/en/support/docs/kilolink-bonding-

platform/kilolink-bonding-platform/

9 Firmware upgrading

9.1 Download upgrade firmware

Kiloview will continue to provide the firmware of updating functions and fixing bug for P2, please visit:

https://www.kiloview.com/en/support/download/

Select "video encoders" > "P2", find and download the latest firmware.

9.2 Upgrade device firmware

Login the management web page of P2, click "Settings"-- "Firmware Upgrade" to check

whether the latest firmware version downloaded is higher than your current version. If yes,

select the downloaded firmware and click "Firmware Upgrade".

After uploaded the firmware successfully, it need reboot the device. After clicking "ok", the device will restart, please be patient.

Note

- Please not power off during the upgrade process, otherwise the device couldn't work.
- Due to the configuration differences between different versions, it is recommended to restore the factory settings of the device after the upgrade to ensure a better user experience.
- Generally, it will take 3-5 minutes to upgrade the device. If it's still not completed after 5 minutes, please try refreshing webpage, if you still can't access it, please try to contact technical support.

10 Restore factory settings

If the device cannot work normally after modifies the parameters or forgot internet IP

configuration and couldn't search and find the device, please restore factory settings.

Two methods for restoring factory settings:

1) If you can login to web page, then via the WEB page, click "Settings—System settings--

Restore factory settings".

2) If you can't login to web page, press the RESET button for 5 seconds in the bottom of

device.

Note: After restoring factory setting, below parameters will be turned to default value:

- Login username and password will be "admin" ;
- IP address will be restored as 192.168.1.168, subnet mask will be 255.255.255.0;
- All encoding parameters of video and audio will be restored to default value.

11 Others

P series encoders support multi-party voice intercom. For more

details and to obtain KIS intercom server, please visit:

https://www.kiloview.com/en/kiloview-intercom-server

To prolong the device life, please unplug the power and keep it properly if you do not use

it for a long time.
